## **Amendments to the Claims:**

This listing of claims replaces all prior versions, and listings, of claims in the application:

## **Listing of Claims:**

1. (Original) A method for datatype caching of an SQL template with references, comprising:

converting the SQL template into a converted SQL template with an associated cast function;

acquiring a datatype of the converted SQL template; and storing the datatype of the converted SQL template with the SQL template.

- 2. (Original) The method of claim 1, wherein converting the SQL template comprises replacing tokens in the SQL template with the associated cast function.
- 3. (Original) The method of claim 2, further comprising forming a valid SQL statement from the converted SQL template.
- 4. (Original) The method of claim 3, wherein forming the valid SQL template comprises acquiring the datatype of the valid SQL statement.
- 5. (Original) The method of claim 4, wherein acquiring the datatype of the converted SQL statement comprises passing the valid SQL statement through an SQL processor.
- 6. (Original) The method of claim 1, further comprising inquiring if a descendent of the converted SQL template has been modified.
- 7. (Currently Amended) The method of claim 6, <u>further comprising:</u>

wherein if the descendent of the converted SQL template has been modified, reevaluating an SQL template for the descendent and cascading a modified datatype up to ancestors of the converted SQL template.

Serial No.:10/662,087

Attorney Docket No.: SVL920030083US1/IBMP029 Page 3 of 8

8. (Currently Amended) A computer program product <u>comprising a computer useable</u> <u>medium including a computer readable program, wherein the computer readable program when executed on a computer causes the computer to: having instruction codes for datatype eaching of an SQL template with references, comprising:</u>

a first set of instruction codes for converting the convert a SQL template into a converted SQL template with an associated cast function;

a second set of instruction codes for acquiring acquire a datatype of the converted SQL template; and

a third set of instruction codes for storing store the datatype of the converted SQL template with the SQL template.

- 9. (Currently Amended) The computer program product of claim 8, wherein <u>converting</u> the of-instruction codes <u>comprises replacing replaces</u> tokens in the SQL template with the associated cast function.
- 10. (Currently Amended) The computer program product of claim 9, further comprising instructions causing the computer to form a fourth set of instruction codes for forming a valid SQL statement from the converted SQL template.
- 11. (Currently Amended) The computer program product of claim 10, wherein the fourth set of instruction codes acquires forming the valid SQL template comprises acquiring the datatype of the valid SQL statement.
- 12. (Currently Amended) The computer program product of claim 11, wherein the fourth set of instruction codes passes acquiring the datatype of the converted SQL statement comprises passing the valid SQL statement through an SQL processor.
- 13. (Currently Amended) The computer program product of claim 8, further comprising instructions causing the computer to inquire a fifth set of instruction codes for inquiring if a descendent of the converted SQL template has been modified.
- 14. (Currently Amended) The computer program product of claim 13, wherein <u>further</u> comprising instructions causing the computer to:

Attorney Docket No.: SVL920030083US1/IBMP029 Page 4 of 8 Serial No.:10/662,087

if the descendent of the converted SQL template has been modified, the fifth set of instruction codes re-evaluates re-evaluate an SQL template for the descendent and cascades a modified datatype up to ancestors of the converted SQL template.

15. (Original) A system for datatype caching of an SQL template with references, comprising:

means for converting the SQL template into a converted SQL template with an associated cast function:

means for acquiring a datatype of the converted SQL template; and means for storing the datatype of the converted SQL template with the SQL template.

- 16. (Original) The system of claim 15, wherein the means for converting the SQL template comprises means for replacing tokens in the SQL template with the associated cast function.
- 17. (Original) The system of claim 16, further comprising means for forming a valid SQL statement from the converted SQL template.
- 18. (Original) The system of claim 17, wherein the means for forming the valid SQL template comprises means for acquiring the datatype of the valid SQL statement.
- 19. (Original) The system of claim 18, wherein the means for acquiring the datatype of the converted SQL statement comprises means for passing the valid SQL statement through an SQL processor.
- 20. (Currently Amended) The system of claim 15, further comprising: means for inquiring if a descendent of the converted SQL template has been modified; and

further comprising-means for re-evaluating an SQL template for the descendent and for cascading a modified datatype up to ancestors of the converted SQL template if the descendent of the converted SQL template has been modified.
